

Refactoring test

Task Description: Our “Family Simulator” needs to be refactored:

1. Refactor the code
2. Get rid of using \$_SESSION for storing
3. Add “Adapt Child”, which should also work without a dad.
4. Cover your refactored code with unit tests.

Some helpful hints:

- You shouldn't keep the current file structure (we don't want to have all in a single file).
- You are free to use any library.
- You do NOT have to improve the frontend display.

Software package:

<https://drive.google.com/open?id=0B9DkoWbpP773RGF6azFZUVAxUDg>

Estimated time to finish: about three hours

Enjoy!
